Users report that they do not see a high-quality picture on the high-definition endpoints when they call into Cisco Meeting Server. An engineer must extract the SDP that is offered by Cisco Meeting Server from the SIP traces to troubleshoot. What is the cause of this issue?

- **A.** Cisco Meeting Server is not configured for H.265 to support high-definition video calling.
- **B.** The AES ciphers are not compatible with high-definition video calling.
- **C.** The Content-Length value in the SDP does not support high-definition video calling.
- **D.** The SIP call bandwidth is not at a value that supports high-definition video calling.

Refer to the exhibit. When a user dials 8001 to connect to a space that is hosted on Cisco Meeting Server, the user is prompted for a pin. The prompt says the user should press # to connect to a meeting without a pin, but guests and hosts must enter a pin before connecting to the meeting.

Which configuration change resolves this issue?

- **A.** The secret value must be changed to be solely numeric instead of alpha-numeric.
- **B.** The passcode must be changed to be longer than four digits.
- **C.** All access methods that are associated with the space must be changed to include a pin.
- **D.** A callLegProfile must be created and associated with the space so that pins are not optional.
