Question No. 1

Refer to the exhibit.

An engineer is investigating a case with suspicious usernames within the active directory. After the engineer investigates and cross-correlates events from other sources, it appears that the 2 users are privileged, and their creation date matches suspicious network traffic that was initiated from the internal network 2 days prior. Which type of compromise is occurring?

- A. compromised insider
- B. compromised root access
- C. compromised database tables
- D. compromised network

Answer: D

Question No. 2

An organization installed a new application server for IP phones. An automated process fetched user credentials from the Active Directory server, and the application will have access to on-premises and cloud services. Which security threat should be mitigated first?

- A. aligning access control policies
- B. exfiltration during data transfer
- C. attack using default accounts
- D. data exposure from backups

Answer: B

Question No. 3

A threat actor has crafted and sent a spear-phishing email with what appears to be a trustworthy link to the site of a conference that an employee recently attended. The employee clicked the link

and was redirected to a malicious site through which the employee downloaded a PDF attachment infected with ransomware. The employee opened the attachment, which exploited vulnerabilities on the desktop. The ransomware is now installed and is calling back to its command and control server. Which security solution is needed at this stage to mitigate the attack?

- **A.** web security solution
- **B.** email security solution
- **C.** endpoint security solution
- **D.** network security solution

Answer: D

Question No. 4

What is the purpose of hardening systems?

- **A.** to securely configure machines to limit the attack surface
- **B.** to create the logic that triggers alerts when anomalies occur
- **C.** to identify vulnerabilities within an operating system
- **D.** to analyze attacks to identify threat actors and points of entry

Answer: A

Question No. 5

A company launched an e-commerce website with multiple points of sale through internal and external e- stores. Customers access the stores from the public website, and employees access the stores from the intranet with an SSO. Which action is needed to comply with PCI standards for hardening the systems?

- **A.** Mask PAN numbers
- **B.** Encrypt personal data
- **C.** Encrypt access
- **D.** Mask sales details

Answer: B
